Create A Webpage Assignment

You should use...   To create...

Notepad++   ☐ 1 (one) Complete Website
                              • Links
Adobe Photoshop   • Images
                              • Content
Adobe Illustrator   • Navigation
                              • CSS

<u>Instructions</u>: Using what you know about HTML and CSS, you will create a website using Notepad++, Adobe Photoshop, and Adobe Illustrator.

<u>Remember,</u> you should use your webpage template file to draft a mock-up of what you want your final site to look like.

Part 1 -Plan out your Website Layout & Theme

Step 1 – *Think of a Theme*

- What is your website going to be about? (hobby, diary, interest, fan-site, portfolio, etc.)

My theme is: _____

Step 2 – *Decide on a Layout*

- What is my site going to **look like**?
- Where am I placing:
    o Header
    o Navigation
    o Body/Content
    o Article or Aside
    o Footer
- Have I used the **Illustrator file** to help me place elements?
- Have I created the images/content using **Illustrator & Photoshop?**

HEADER - Includes: Webpage title, pictures/logos, graphics, etc

NAVIGATION - Includes: Links to other parts of your webpage

CONTENT:
This is where the content of your page will go: Articles, highlights, etc.

HIGHLIGHT / ARTICLE / ASIDE
You'll put content you want to highlight here

FOOTER:
Legal or contact information, FAQs, copyright, etc.

Step 3 – *Decide on Content*

- Where am I going to get this content? Will I have to create most of it? Some of it?
- What images am I going to include? How many? Will I need to create them?
- What kind of text will I have on my website? Will it be written by me?
- How am I going to present this content?
- What do I want my viewers to do with this content? How will they interact with it?
